Abstract (en)
[origin: EP0322563A2] A manipulator device for extracting products (4) from a mold (5) and for arranging them on a conveyor belt, in particular for soap-molding machines or the like. The device comprises a main frame (2) which supports grip means (3) engageable with the products (4) to be extracted from a mold (5) and actuation means which act on the grip means to move them from a first position, in which they are arranged facing the mold, to a second position, in which they are arranged facing a conveyor belt. The actuation means comprise actuator means (7) which partially rotate the grip means about an axis which is substantially perpendicular to the plane of the face of the products which is engaged with the grip means to correctly position the products on the conveyor belt.
