Abstract (en)  
[origin: EP0322613A2] Contact disc (1) for supporting a rotating grinding belt (2), with a belt-running cushion (4) which is arranged all round the disc body (3) and has belt-supporting webs (5) distributed over the periphery. In order to improve a contact disc (1) of the type mentioned at the beginning in such a way that the acoustic loading of the grinder is reduced at a certain grinding capacity, it is designed in such a way that the belt-supporting webs (5) are designed with belt-contact edges (6) arranged at non-uniform distances (a to d) apart. <IMAGE>
