Abstract (en)  
[origin: EP0322628A2] In order, in the case of a cloth laying apparatus with a guide, along which a cloth web extends in the laying-out direction, and with a cutting machine comprising a counter-cutting blade, arranged on one side of the guide and extending transversely to the laying-out direction, and a cutter wheel which rotates in order to sever the cloth web and bears with a circumferential external cutting region on an edge of the counter-cutting blade extending transversely to the laying-out direction, to obtain a cutting machine with the simplest possible design, the cutting region is to be a cutting surface extending substantially perpendicularly to the axis of rotation of the cutter wheel, and the cutting surface and the edge bear on one another in parallel alignment and linearly. <IMAGE>
