Abstract (en)
[origin: WO8905941A1] The present invention relates to an electro-portable apparatus for the production of steam applied to a surface, usable more particularly for ungluing wall coatings. This apparatus is characterized in that its housing (2, 3) is subdivided by means of a partition wall (8, 27) into two compartments, namely a rear closed compartment (9, 28) containing the steam generator itself (12, 13) consisting of the porous body (12) impregnated with liquid and means (13) for heating such liquid, and a front compartment (11, 29) forming a vaporization cavity or "steam plate", open to the outside, and openings (31) are provided through the partition wall (27).
