Abstract (en)

Method to lift beds (10) in particular, in which the bed (10) is lifted at an angle (11) from a floor (19) by a lifting device (12) which is, or momentarily can be, connected to a frame (14) of the bed (10), the lifting device (12) consisting of: - support means (15) cooperating with the frame (14), - oscillatory means (18) which bear wheels (20) and are pivoted on the support means (15), - lifting means (16) pivoted on the support means (15) and on the oscillatory means (18), and - resilient resistance means (21) connected to the support means (15) and to the oscillatory means (18). Bed (10) which employs the above method and comprises a lifting device (12) connected or capable of being connected momentarily to the frame (14) of the bed.
