Abstract (en)

[origin: EP0323772A1] The present invention relates to a device (1) for the centring of a lining, especially for a borehole, comprising at least one centring member (6, 2), relative to which said lining can rotate. This device is characterised in that it comprises progressive means (23, 24) for driving this member (6, 2) in rotation with said lining. <IMAGE>
