Abstract (en)

[origin: EP0323811A2] The device of the invention comprises a command and/or information signal generator (1), a clock oscillator (3) cooperating with a binary counter and a multiplex generator (2), the output of the multiplex generator (2) being connected by a single conductor (4) to a receiver (6) located for example on board a trailer, the receiver (6) comprising means for separating the clock signal from the signals constituting the command or information data, said means being connected to power actuators (11) for said commands and/or information.
