Abstract (en)

[origin: EP0323939A1] The generator comprises 3 vertical tubes (14, 13, 26) connecting a lower duct (2) and an upper duct (8). The central tube (14) is a heating tube which bears an electric resistance heating element (17). The second tube (13) is a return tube which makes possible the return of water from the upper duct (8) to the lower duct (2). The steam escapes via an escape opening (11) of the upper duct (8). The third tube (26) comprises a resistive probe (27) which measures the level of the water and makes possible its adjustment to an intermediate level (20).
