Abstract (en)
[origin: EP0324100A1] The invention relates to a roof covering slab, in particular of plastic, having an underside stabilising slab (6) which possesses webs (7) for supported fixture to roof laths (8) and which is provided with at least one hole for the passage of a roof-lath fastening pin, and proposes, in order to obtain a stable structural shape which is favourable to assignment, that the hole (14) be arranged in the region of a retaining bracket (13) lying with its broad face (13') approximately in the supporting plane of the webs (7). <IMAGE>
