Abstract (en)
[origin: EP0324151A1] An electrical terminal clamp for a screw terminal with a baseplate, having a passage for a clamping element, on which there are seated anchoring limbs, which are bent at right angles and lie opposite parallel to one another, for holding a spring clamping disc, and with supporting webs projecting at right angles on opposite sides of the baseplate. The technical problem is the provision of a screw terminal clamp which can easily be attached to pegs in housings, especially terminal housings. Each anchoring limb (4) terminates in two tongues (7), each having mutually opposite slots (8). The spring clamping disc (12) is inserted in these slots. The end-face side wall (9) of each slot (8) is pressed onto the spring clamping disc (12). <IMAGE>
