Abstract (en)
[origin: EP0324169A1] In order, in the case of an installation unit with a case frame and a stand capable of resting on a bare floor, to avoid a welded connection between the case frame and the stand, the stand (13) possesses vertical connecting elements (20) arranged at a distance from the two vertical profiled sheet-metal parts (12) of the case frame (10). These connecting elements (20) have a cross-sectional profile making it possible for them to be brought into fitting engagement with the vertical profiled sheet-metal parts (12) of the case frame (10). In this state, the connecting elements (20) can be permanently fastened to the case frame (10) by a series of pressed joining points (cold-pressed junction points). <IMAGE>
