Abstract (en)

[origin: EP0324299A1] The invention relates to a box pallet with separate, aerated modules, intended especially for storing delicate natural products such as tubers, bulbs or onions. According to the invention, the box pallet is formed from superposed modules (3) which form storage levels for the products. Each module (3) is formed from an assembly of articulated flaps (7) which can provide support for the products or ensure their evacuation when they are pivoted. Moreover, the fall of the products is checked by the position of the flaps (7) placed in alternating slanting positions. The invention relates to the packaging industry. <IMAGE>
