Abstract (en)

[origin: EP0324666A1] The stop consists of a part 6 having a substantially vertical plane face 7 and of a rounded part 9 which rests via a lower face which is also rounded, over its entire length, and in the manner of a swivel joint, on a fixed part 10 having a corresponding rounded profile, the movable part (6, 9) being capable of pivoting automatically on the fixed part when a batten 8 is applied against it, and of thus being placed in a position in which its plane face bears, along its entire surface, on the corresponding face of the batten. Application to the stapling of battens for picture frames. <IMAGE>
