Abstract (en)

[origin: WO8802717A1] Device in mats or driving belts for snow vehicles, on which mats or belts strips or rails extending transversely to the direction of motion of the mat are arranged for improving the progressing of the vehicle on snow or ice by having the rails to dig down into the ground and to transfer to the same the propulsion power of the mat. The rail comprises a fixing device (12, 14, 18) which is devised to be permanently fixed to the mat (10) and a grab profile (16) detachably attached to the fixing device. The grab profile (16) is preferably formed so that a too high load on the rail causes rupture in the grab profile, which profile is easily exchangeable.
