Abstract (en)
[origin: EP0325122A1] The packaging arrangement as a vending aid for torches consists, in the manner of a blister pack, of two semi-shells (1, 1') made of transparent material, which are adapted to the torch head, are connected to each other via a cardboard suspension piece (4), which is clamped between said semi-shells and can bear printing, and can be detached from the connection again. By this means, an expensive bulb (e.g. a halogen bulb) and the batteries can be inserted even after the sale and the purchaser can still have an undestroyed package. The operating knobs on the lamp are exposed and can be tested by the purchaser. <IMAGE>
