Abstract (en)
[origin: EP0325182A2] The socket for a two-pin halogen lamp is fitted with a base which carries socket contacts and attachment parts for the socket, for retention in a housing. Between the attachment parts and the socket contacts there is provided a current-carrying connection as a functional element of the socket; in this case, the functional element is constructed from a common material and is constructed as one piece with the bearing surface for the lamp pins and/or with the attachment part. <IMAGE>
