Abstract (en)
[origin: WO8906560A1] The surf board of the invention is of the type having a wasp-waist profile, in other words a surf board which has dimension lines (6, 7) which are curved inwardly, and wherein the bindings (12, 13) form each an angle with a line perpendicular to the longitudinal axis of the ski. According to the invention, both dimensional lines (6, 7) are longitudinally offset with respect to each other and are positioned in such a way that the point of deepest curvature of each dimensional line is situated on the symmetry axis of axes passing through both bindings.
