Abstract (en)

The connection between each oscillating lever (11) fixed to the operating cable (10) of the mechanism and the spring reverse motion (1) corresponding to it is made by means of a secondary cable (12) which winds onto a part (11a) of the lever concentric with the pivot (7) of the latter, in order to ensure that said spring reverse motion has a perfectly linear displacement without any transverse component. <IMAGE>

Abstract (fr)

La liaison entre chaque levier oscillant (11) solidaire du câble de manœuvre (10) de la mécanique, et le registre de ressorts de rappel (1) qui lui correspond est opérée à l'aide d'un câble secondaire (12) qui s'enroule sur une partie (11a) du levier concentrique au pivot (7) de celui-ci, afin d'assurer audit registre un déplacement parfaitement linéaire, sans composante transversale.
