Abstract (en)
[origin: EP0325721A1] The cuboid collection container (1) for waste disposal, in particular a stackable cuboid tank container or intermediate bulk carrier, has an underbody (2), which projects over the side walls (4a-4d) and is connected to the bottom (11), and a frame-shaped upper enclosure (6) of the container body (B, B') in the region of an upper end (9) or lid, the side walls, which are straight in the vertical direction, being curved outwards between the corner regions (5). The side walls (4a-4d) are curved with a radius (R) which exceeds the side length (S) by up to the ten fold, so that each corner region (5) is arched between two side walls (4a-4d) with a radius (r) of between 7% and 30% of the side length (S) and fits snugly between the curvatures of the side walls. <IMAGE>
