Abstract (en)
[origin: EP0325738A2] A clamping device (1) for clamping vices (S) to machine tables (M) has an essentially rectangular, flat clamping strap (2) with an elongated slot (3) extending in its longitudinal direction for a clamping screw (7) to pass through. The clamping screw (7) can be anchored in a T-slot (9) of the machine table (M). An abutment plate (5) is eccentrically arranged on a bolt (6), displaceable in the elongated slot (3), and is pivotable about the bolt axis (A). The underside (2a) of the clamping strap is supported on the abutment plate (5). <IMAGE>
