Abstract (en)

[origin: EP0325800A2] Control device for a motor-vehicle door-locking arrangement, at least one door lock of which has an electronically actuated mechanism with a servomotor which is controlled automatically by means of a service control device after activation with the effect of a locking movement or an opening movement. In addition, there is an electronic safety switch device which overrides the service control device and which has at least one driving sensor and an associated switch. The driving sensor cuts off the service control device via the associated switch when the motor vehicle exceeds a predetermined driving speed. <IMAGE>
