Abstract (en)

To separate lignin from cellulose material, the latter is exposed to the action of ozone in the gaseous phase in the presence of at least one C1-3-fatty acid, particularly acetic acid, in order to render the lignin contained in the cellulose material more soluble in the fatty acid by oxidative conversion.

Abstract (de)

Zur Abtrennung von Lignin aus Cellulosemasse wird diese in Gegenwart mindestens einer C1-3-Fettsäure, insbesondere Essigsäure, der Einwirkung von Ozon in der Gasphase ausgesetzt, um das in der Cellulosemasse enthaltene Lignin durch oxidative Umwandlung in der Fettsäure löslicher zu machen.
