Abstract (en)
[origin: EP0325894A1] The one-piece closure has a bottom part (1) and a cap (2) which is connected to said bottom part via a hinge (3). The side walls (11) of the bottom part (1) extend obliquely outwards from the covering surface (10). An outlet spout (13) penetrates the covering surface (10). Said spout is inclined in such a way that it extends parallel to the side wall part (11') in the region of the hinge (3). The particular geometry of the closure allows a one-piece hinged closure with outwardly inclined walls to be injected into a mould without a slide. This also allows the bottom part (1) of the closure to be designed as a tube head. <IMAGE>
