Abstract (en)

[origin: EP0326089A2] In a submunition (1) with a stabilising parachute (4), the latter is to be deployed from its packed position independently of a carrier projectile. The pull-out device is formed by a balloon (3) inflatable by means of a gas generator (11). The stabilising parachute (4) is arranged inside the balloon (3) and in the inflated balloon (3) is pulled out of its packed position in this. The balloon (3) bursts after the inflation and thus releases the stabilising parachute (4) for deployment. <IMAGE>
