Abstract (en)
[origin: EP0326451A1] The package comprises a rectangular or square base (2) edged by two longitudinal sides (3, 4) and by two transverse sides (5, 6) each of which is connected to the said base (2) by a folding line (7, 8, 9 or 10), each longitudinal side (3, 4) being extended at each of its ends by a flap (11.5, 11.6, 12.5 or 12.6) articulated about a folding line (13, 14, 15 or 16) orthogonal to the one (7 or 8) connecting the corresponding longitudinal side (3 or 4) to the said base (2). According to the invention, this package is characterised in that among the two flaps (11.5, 12.5 or 11.6, 12.6) associated with a transverse side (5 or 6), one of them (11.5, 11.6) has a length greater than half of the length of the corresponding transverse side (5, 6) and comprises a protrusion (41) which alone forms a stacking stud. <IMAGE>
