Abstract (en)  
[origin: WO8906578A1] The device for projecting a coating to the internal faces of a liquid metal pouring container (2) comprises a projection lance (3) fixed to a carriage (4). The carriage (4) is translationally movable on a guide (6; 106) extending in a first direction (D; L) which is longitudinal or transversal to the container (2) and which is itself translationally movable on guiding means (7; 107) extending along a second direction (L; D) transversal with respect to the above-mentioned direction (D' L). Said guiding means (7; 107) are mounted on a support (8, 12) which is translationally movable in the longitudinal direction (D). Utilization for coating particularly the inside of melt distributors.
