Abstract (en)
[origin: EP0326675A1] A sealing strip serves to seal the joints of successively produced arch-like sections or the like made of reinforced concrete. It consists of a film strip with anchoring profiles arranged on one side and made of a flexible and/or elastic plastic or synthetic rubber. So that a sealing strip of this type is also able to seal the joints between adjacent sections made of reinforced concrete if cavities should develop in the reinforced-concrete sections in the area of the sealing strip, the strip consists of a flat tube (1) with anchoring profiles (6) located on the outside of a layer (5). The tube layer (5) provided with the anchoring profiles (6) is provided with perforations (7) and in the area of its longitudinal centre line with a tube (8) or with several tubes at a distance from one another (single figure). <IMAGE>
