Abstract (en)

[origin: EP0326698A2] The invention relates to a device for keeping ajar a turn-and-tilt wing of a window or door, with an abutment to be fastened to the frame and intended for a pin displaceable by means of a driving rod of the wing. So that the turn-and-tilt wing can be transferred out of a closed position into a turn position, into an ajar position and into a tilt position and back again free of malfunctioning and reliably, the abutment will have a fork aperture for the engagement of the displaceable pin and will be mounted pivotably on a bearing plate and be lockable in various pivoting positions by means of resilient catches. <IMAGE>
