Abstract (en)
[origin: EP0326911A1] The present invention concerns a panel for grille false ceilings, of the modular-assembly type, consisting of a grille supporting frame, onto which plates (3) of various dimensions are hinged. The said plates (3), once in place, constitute the volume part of the false ceiling and can be swung, giving a choice of a working position perpendicular to the plane of the grille, with the individual plates (3) of which the false ceiling consists open to the maximum, or a resting position parallel to the plane of the grille, taking up minimum space.
