Abstract (en)  
A seam is made by bringing together the edge portions of two sheets (1,2) of flexible waterproof material in a cusped configuration and sandwiching between those portions a bead (7) of sealant and/or adhesive. The seam is then stitched, the stitches (5) passing through the bead. Heat and/or pressure is then applied to ensure that the sealant and/or works into all the interstices within the cusp, and at least partially into the stitch holes.
