Abstract (en)

[origin: EP0327464A1] The invention relates to contacts for connector units. It relates to contacts comprising two terminals (10, 12) having contact elements (16, 18, 20), which terminals are aligned in a direction transverse to their planes and connected via a cheek (26) which is integral with the two heads. One of the contact terminals has a projection (28) which defines a position for flexing an elastic tail (30) remote from the closest edge of the cheek (26) so that the stresses are applied away from the cheek. Application for producing the cable terminals and the connecting strips of telephonic distribution frames. <IMAGE>
