Abstract (en)  
[origin: EP0327527A2] The cutting members consist of knife blades (3) mounted so as to project on the surface of a drum (2), the blades (3) being mounted on pivots (8) so as each to be capable of pivoting in a plane perpendicular to the longitudinal axis of the drum (2), the blades (3) being arranged so as to pass between the teeth (6) of a comb (5) when the drum is driven in a rotational movement about its longitudinal axis, and the drum (2) is coupled to a drive motor (4) capable of causing it to rotate at high speed. The comb (5) is arranged so as to have the possibility of adjusting the spacing of the teeth (6) in order to allow an adjustment of the size of the chopped pieces. <IMAGE>
