Abstract (en)
[origin: WO8901355A1] An anti-theft device for a ski safety binding comprises a jaw with ratchets and abutments for supporting locking devices which maintain a sole support in a locked position. To achieve a device of this type which precludes the possibility of a successful unauthorized manipulation which does not impair the fitness for use of the binding itself, a locking device (100) has a locked position in which a part coupled with an abutment (102, 21) or with a ratchet (10, 11) is maintained in a position corresponding to the open or released position of the binding.
