Abstract (en)

Dispenser for dispensing paper lengths (103) from a paper roller (3) housed in said dispenser, comprising a box (1) made of a material having a comparatively small stiffness and provided with an overturnable cover (2). Between the lower side of the front edge of the cover (2) and the cooperating rim (9) of the box a slit for the passage of the paper ribbon (103) is formed, said slit being sidewise confined by two side wall members (5,5 min) depending from said cover (2). Thanks to the above construction, and to the fact that said cover (2) is resiliently yieldable, by depressing the front edge of said cover (2), said ribbon (103) is blocked between the lower side of the edge of the cover (2) and the co-operating rim (9) of the box (1) during the tear-off operation.
