Abstract (en)

[origin: EP0327866A1] The device comprises storage spaces (S1 to S9) arranged next to one another along a straight or curved line. A transport unit (4) can be moved along said line. An alignment station (12) centres the end cover (3) with respect to the roll (20). In this manner, large stacks of end covers of different size can be deposited in a roughly aligned manner at the storage spaces. This reduces the expenditure for the subsequent filling of the storage spaces quite considerably. <IMAGE>
