Abstract (en)
[origin: EP0327882A2] The rope conveyor comprises vehicles secured by clamps to the endless rope, and a section diverted in the lateral and vertical directions. It has a rigid guide member (1) at the curves at least, and along which the haulage rope (6) runs, while the vehicles have crops (12) with rollers travelling along the guide. Each clamp (10) with its vehicle can be deflected at right angles to the guide axis, but is solidly coupled to its vehicle in the direction of this axis.
