Abstract (en)
[origin: EP0327927A2] A detergent additive containing at least partly water-soluble polymer components based on N-vinylpyrrolidone or N-vinylimidazole or N-vinylloxazolidone in combination with water-soluble or water-insoluble cationic compound has a discoloration-inhibiting effect and has a neutral odour even in contact with alkaline detergent components. The insensitivity of an additive of this type to strongly alkaline detergent components can be further increased by including in the additive polymer components with acidic groups or zinc ricinoleates.
