Abstract (en)

A Process for covering a surface of a wall (1) or similar structural part of concrete or another stone-type material with a plastic layer in the form of a sheet, in which a number of strips (2) spaced apart and running essentially parallel to one another are fixed to the wall by means of anchoring members (3) or similar members in such a way that the surface parts of the strips (2) projecting most from the wall (1) lie in one flat, curved or broken finishing face, a layer of concrete or similar material is then applied to the concrete wall (1) in such a way that the outer surface of this layer essentially coincides with the said finishing face, following which the sheet-type plastic layers are laid against the finishing face and connected to the above-mentioned surface parts of the strips (2).
