Abstract (en)
[origin: EP0328467A1] The lug is of the type comprising, on each side of a linking part (11), straight or bent, a branch (12) for crimping over a conductor (1) and a connection branch (13) forming a tubular plug (16) intended to engage with a cylindrical cavity (4), which is tubular, conductive and has a bottom closed off and surrounded by an insulating ferrule. The lug is characterised in that the connection branch (13) comprises a plug (16) of larger diameter than the internal diameter of the cavity and defined by two triangular wings (20a and 20b) which are rolled towards each other without touching. Application to connection lugs between a conductor and a cavity-shaped terminal. <IMAGE>
