Abstract (en)
[origin: EP0328707A1] The known conveying and stacking apparatus for sheet bodies of the type that the apparatus includes a conveyor for continuously conveying sheet bodies and a stacking table on which sheet bodies ejected from an end of the conveyor on the downstream side in the conveying direction are stacked, and the sheet bodies are separated at every predetermined number of sheets and then conveyed and stacked, is improved in that at least one suction pad is disposed at an inlet portion of the conveyor and adapted to selectively suck and stop the sheet body, and a plate is disposed on the downstream side of the suction pad so as to be freely projected into and retracted from a conveying route of the sheet bodies.
