Abstract (en)  
A primer composition containing solvents, a film forming binder and pigments of an electrically conductive carbon black pigment and the binder contains about (1) 40-70% by weight of a polyester copolymer having linear segment with hydroxyl groups and a hydroxyl number of about 15 - 300 and a number average molecular weight of about 300 - 3,000 and branched chains having hydroxyl groups and having a hydroxyl number of about 175 - 300 and a number average molecular weight of about 500 - 2,000 and are attached to linear segment by esterification of the hydroxyl groups with a diacid or an anhydride; and (2) 30 - 60 % by weight of an alkylated melamine formaldehyde crosslinking agent; wherein the composition forms a hard flexible coating on a substrate whereby the coated substrate can be bent 180 DEG around a 1/2 inch mandrel with the coating facing outward and the coating exhibits substantially no breaks or cracks when tested at -18 DEG C and the coating has a surface conductivity of at least 160 Randsburg units.
