Abstract (en)
[origin: WO8907681A1] A dosing reservoir (1) for receiving and discharging a liquid agent for treating laundry in a washing machine or the like comprises a reservoir provided with a filling port (5) closed by a lid provided with holes (6) for the exchange of media and supported by gripping elements (4', 8'). To obtain a dosing reservoir (1) of minimal height with respect to the bottle (13), the gripping elements (4', 8') are each formed by a collar (4,8) extending radially inward with respect to the outer surface of the dosing reservoir (1). The opening cross-section coincides with the dome (D) of a bottle closure cap (K).
