Abstract (en)

[origin: EP0329031A1] The subject of the invention is a protection of the passage of rail vehicles coupled to one another and is in the form a double corrugated bellows made of rubberised fabric or the like. The corrugations of the one bellows (1) are open towards the passage, the corrugations of the other bellows (2) are open towards the vehicle sides and an end frame (3) serves for the joint fastening of both bellows of the double corrugated bellows (1, 2) to one of the vehicles coupled to one another, the other end frame (4) serving for attaching together both bellows of the double corrugated bellows (1, 2) to the corresponding end frame of the double corrugated bellows of the other of the two vehicles coupled to one another. Projecting guide means (10) are arranged on the one vertical longitudinal side of the end frame of one of the vehicles to be coupled to one another, which frame is intended for connection to the corresponding end frame of the other of the vehicles to be coupled to one another, but guide means which rebound and correspond in arrangement and design are arranged on the other vertical longitudinal side of this end frame. In a corresponding manner, adjustable locking means are assigned to one of the two longitudinal sides of said end frame and receiving means for the locking means are assigned to the other of the two longitudinal sides of this end frame.
