Abstract (en)

Bleachable dyes for use in photographic and photothermographic silver halide emulsions of the general formula: <CHEM> in which: m+p=2, n is 0 or 1, s is 0 or 1, Z<1> and Z<2> independently represent the non-metallic atoms necessary to complete a heterocyclic nucleus of the type present in cyanine dyes and in addition contain a water solubilizing group such as sulphonate, carboxylate, etc., R<1> and R<2> independently represent alkyl or substituted alkyl, alkenyl, substituted alkenyl or aralkyl, each group containing not more than 20 carbon atoms. R<3> and R<4> independently represent a hydrogen atom or an alkyl, substituted alkyl, alkenyl or substituted alkenyl each of which groups contain not more than 10 carbon atoms. R<5>, R<6>, R<7> and R<8>, which together may not contain more than 12 carbon atoms, independently represent a hydrogen atom, an alkyl, substituted alkyl, alkenyl, substituted alkenyl, aryl or alkaryl group, or one of R<5> and R<6> together with one of R<7> and R<8> represent the necessary atoms to complete a carbocyclic ring in which case the others of R<5> to R<8> are absent, Q<1> and Q<2> together represent the non-metallic atoms necessary to complete an acidic nucleus of the type present in oxonol or merocyanine dyes.
