Abstract (en)
[origin: EP0329566A1] A convertor comprising a vessel (1) resting on two supports (2) by means of two diametrically opposed rotary bearing members (3) centred on the same tilting axis (15). <??>According to the invention the two bearing members for the vessel (1) consist respectively of two hoops (3,3') of fairly large diameter bearing on rollers (5) and forming an integral part of the vessel (1), each hoop (3,3') being fastened directly to the side wall of the vessel (1) along its inner edge (31); the diameter of the hoop (3) being determined so that the connection is ensured over a sufficient length. <??>The invention is applied especially to steel manufacture. <IMAGE>
