Abstract (en)

[origin: EP0329573A1] The device comprising a frame in the form of profiled elements (2) having two flanges (2a) (2b) between which the border or borders (1a, 1b, 1c) of the dome are positioned and, perpendicularly to the upper flange (2a), a vertical arm (2c) capable of engaging with the assembly components for fixing the whole unit to a support, is noteworthy in that the lower flange (2b) is not strictly parallel to the upper flange (2a) in order to create a taper effect in opposition to the border or borders (1a-1b) engaged between the said flanges. <IMAGE>
