Abstract (en)
[origin: EP0329584A1] The invention concerns a device for clamping frames (1), constituted by a framework (2) for receiving the frames (1), by a means (3) of clamping the horizontal edges of the said frames (1) and by a means (4) of clamping the vertical edges of the frames (1), characterised in that the means (4) of clamping the vertical edges of the frames (1) is constituted by an arm mounted on the upper longitudinal member (5) of the framework (2) and provided with a device (6) for locking in the operating position by buttressing. <IMAGE>
