Abstract (en)

[origin: EP0329619A2] The aim of the process and of the apparatus according to the invention is the making of corrugated plates from concrete with at least one incorporated net made of polypropylene to prevent the formation of creases on the inner side of the plane which is subject to compression during the bending phase. This result is obtained by creating in the plane and at appropriate intervals folds or ribs which level the creasing, are oriented transversely to the hollows of the plane and also constitute zones for reinforcement of the resulting product. <IMAGE>
