Abstract (en)

An apparatus (2) for feeding flat products comprising at least one conveyance device (5) connected at its input end to a unit (3) for producing flat products and connected at its output end to a device for forming groups of products packed flat against each other and oriented edgewise on the surface of the conveyance device. The conveyance device (5) comprises at least one continuously moving conveyor (6,7) and at least one vibrating channel (8,10) arranged in series to facilitate the return of fallen products to their correct upright position and thus re-establish a continuous row.
