Abstract (en)

[origin: EP0330067A2] A control unit 103 is used to select address carriers 6 in the form of strips wound up into an address roll 31, and to make them available for addressing via a transport path 43. The products 59, preferably folded products, which are situated in a store 57 and are assigned to the selected address carrier 6 are likewise selected and guided to the addressing station. In the latter, after being seized by holding devices 64, the addresses are simultaneously applied, after which the addressed products 59 can be fed by means of tongues 101 to a removal station 104.
